Huma Rooftop at The Grand Hotel, Punta del Este, Uruguay

Perched in a prime location with panoramic views of the iconic Playa Brava, Huma Rooftop has become the first rooftop bar on the east coast, offering an unparalleled luxury experience and cutting-edge design. With a capacity for 120 people, Huma stands out not only for its elegance but also for its commitment to using state-of-the-art materials.

The Grand Hotel Punta del Este, home to Huma, is a benchmark for luxury and comfort in the region. With 118 rooms, a world-class spa, diverse culinary offerings, and the new Grand Center—a multifunctional space for corporate and social events—the hotel is one of the most prestigious destinations for visitors to the Uruguayan coast. Now, with the addition of Huma Rooftop, the level of sophistication has been elevated even further.

Its innovative design is inspired by subtle, undulating shapes that reflect a maritime aesthetic, and it stands out for its use of titanium and other high-quality materials.

One of the most remarkable features of this project is the use of our SentryGlas® laminated glass interlayers in the exterior railings. Thanks to its incredible transparency, the railings blend seamlessly with the landscape, offering an uninterrupted view of the sea. Moreover, SentryGlas® ensures excellent strength and safety, even in post-breakage situations, providing peace of mind without compromising the architectural design.
